

# The Intergenerational Wealth Study: Basic Estate Data, 1916-1945

By Janet G. McCubbin\*

In 1985 the Statistics of Income Division began to reprocess Federal estate tax returns filed since the inception of the tax in 1916. This project, called the Intergenerational Wealth Study, is designed to provide information about the accumulation, concentration and intergenerational transfer of wealth in the United States. The rich demographic and financial data present on estate tax returns provide for research into a variety of aspects of the U.S. population and economy. Family size and structure, inheritance patterns and differences in wealth holding by sex, age and geographic region are some of the circumstances reflected on the estate tax return.

This article provides an overview of basic demographic and financial data from 348,479 returns filed for individuals who died between 1916 and 1945 [1]. These data show that:

- The portion of returns filed for women increased by about 25 percent between 1916 and 1945. In most years women were, on average, less wealthy than men, but that discrepancy began to decrease during the mid-1930's.
- Age was not highly correlated with the size of gross estate, but because older decedents had less debt, net worth increased with age.
- The distribution of estate wealth changed during this period. This coincided with the Great Depression and was consistent with the general decrease in the concentration of wealth in the United States.

The modern Federal estate tax was enacted in September of 1916. An estate tax return (Form 706) must be filed after the death of an individual whose total gross estate equals or exceeds the filing requirement. Total gross estate consists of all real and

intangible property owned by the decedent, including property held jointly with others, before any reduction by debts and mortgages. Assets are included at their fair market value as of the date of death [2]. The estate tax is calculated after the deduction of debts and mortgages, administrative and funeral expenses, losses during administration, property previously taxed, the "specific exemption" and, after 1917, charitable contributions [3]. The credits against the estate tax applicable during portions of the 1916 to 1945 period were those for State and foreign death taxes paid and for gift taxes paid. Data presented here were collected from returns as they were originally filed, without regard to any changes made during audits [4]. Data are tabulated by year of death.

The filing requirement fluctuated between \$40,000 and \$100,000 during the 1916 to 1945 period (see Figure A). This filing threshold limits the scope of the Intergenerational Wealth Study to affluent individuals. Figure B shows the percentage of American decedents age 20 and over for whom estate tax returns were filed, by year of death [5]. The portion of estates subject to the Federal estate tax in each year varied with changes in the filing requirement and other tax provisions, and with changes in real and nominal wealth. Figure C shows the number of estate tax decedents (individuals for whom returns were filed) by year of death. To isolate economic factors from changes in the filing requirement, the number of returns for decedents with estates worth \$100,000 or more is shown separately.

Figure A.—Federal Estate Tax Filing Requirements,  
1916-1942

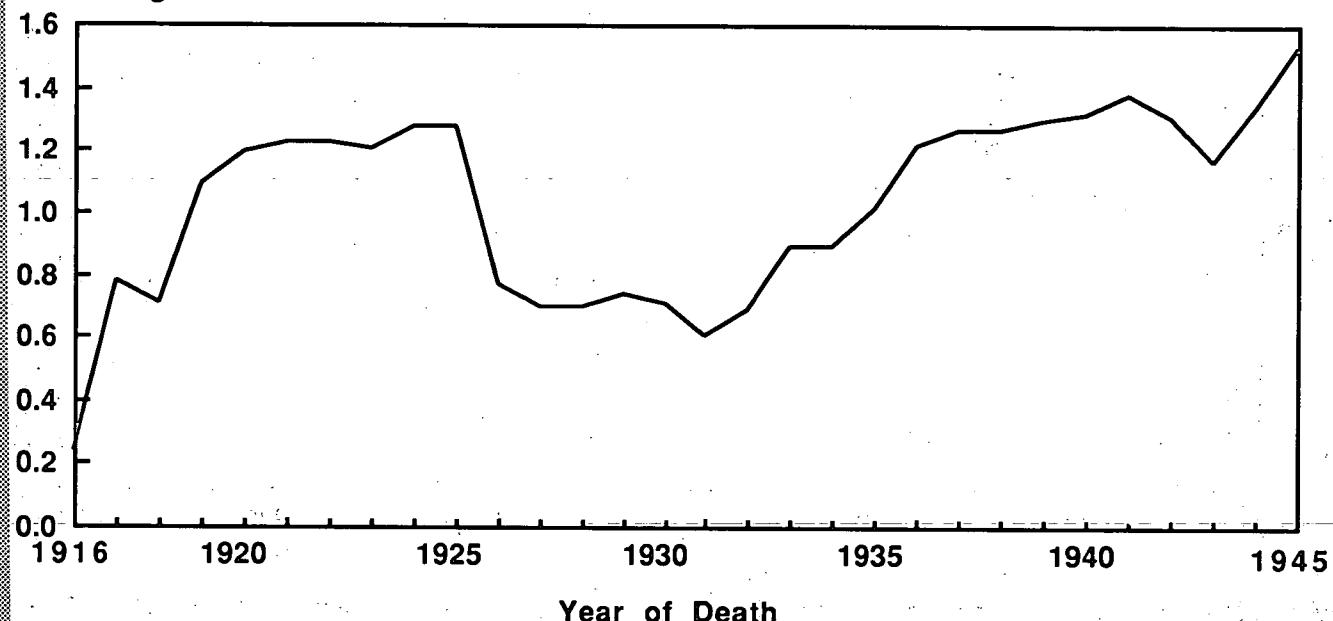

Effective date of change	Gross estate filing requirement
September 9, 1916 .....	\$ 50,000
February 26, 1926 .....	100,000
June 6, 1932 .....	50,000
August 31, 1935 .....	40,000
October 22, 1942 .....	60,000

## Basic Estate Data, 1916-1945

**Figure B**

**Percentage of U.S. Adult Decedents for whom Federal Estate Tax Returns Were Filed, 1916 to 1945<sup>1</sup>**

**Percentage of Decedents**

<sup>1</sup> U.S. resident decedents age 20 and over. The estate tax became effective on September 9, 1916.

Economic growth during the 1920's, the Great Depression beginning in 1929, the economic boom associated with World War II and the general increase in wealth over time are all reflected in the number of returns filed annually.

### DECEDENTS AND TOTAL GROSS ESTATE

Total gross estate was correlated with other aspects of the economy. Figure D depicts the total gross estate reported for all estate tax decedents and (to account for changes in the filing requirement) for those who had assets worth \$100,000 or more. When the estate tax was instituted in September 1916, the American economy was fairly prosperous and operating near maximum capacity, due in part to the demand for goods from allies at war in Europe. This increase in demand extended slightly beyond the end of World War I in November 1918. A brief recession occurred in 1920-21 as Europe and the

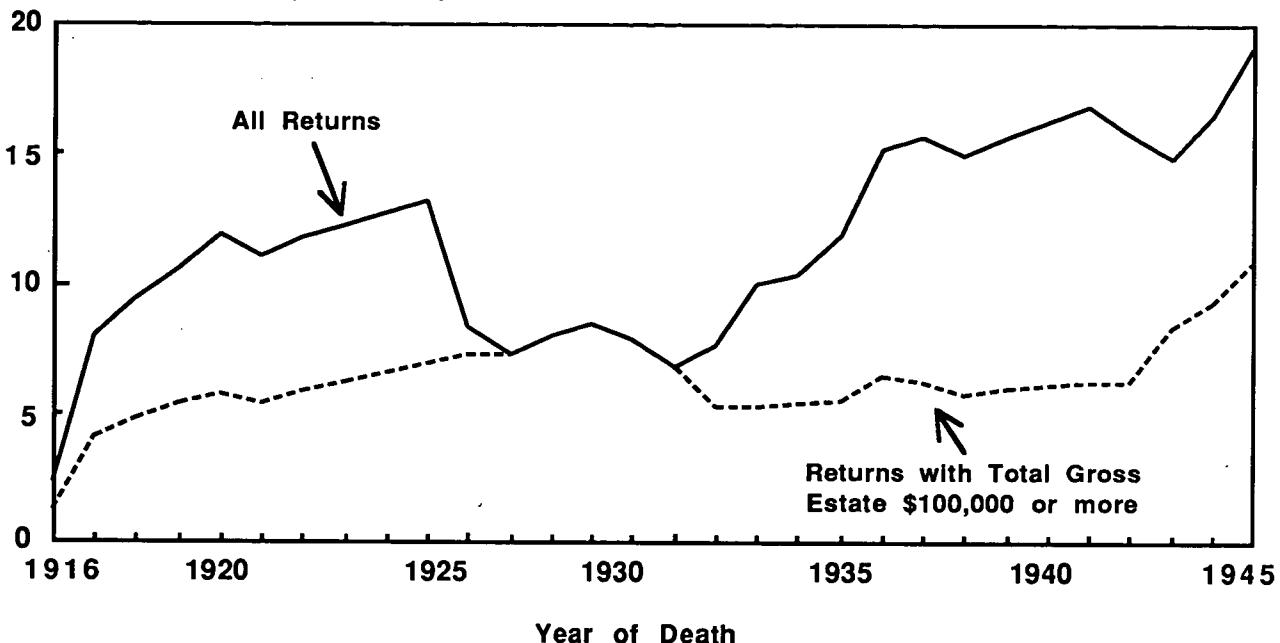

United States switched from wartime to peacetime economies and the Federal government ran a budget surplus, instead of a deficit [6]. Total gross estate from returns with \$100,000 or more dropped by 18 percent between 1920 and 1921.

Not surprisingly, the Great Depression had a significant impact on total gross estate. During 1929, both industrial production and construction declined significantly and in October the stock market became chaotic. When stock prices bottomed out in December, wealth in securities had declined by about \$25 billion, a decrease of nearly 30 percent.

Of course, the stock market crash in 1929 was only the beginning of the Depression. The economy continued its downward spiral for 4 years. Total gross estate from returns with \$100,000 or more fell by 51 percent between 1929 and 1932. During those years, the price of securities in the United States fell

**Figure C**  
**All Returns and Returns with Total Gross Estate \$100,000 or More,  
 1916-1945**

Number of Returns (Thousands)

by more than 80 percent. Real national income fell by 36 percent between 1929 and 1933. Gross national product did increase annually from 1933 to 1937 but despite work relief, banking reform and other programs, more than 14 percent of the civilian labor force was still unemployed in 1937, and the economy, operating at only 80 percent of capacity, suffered another setback [7]. Total gross estate also fell, by 17 percent between 1936 and 1938, for returns with \$100,000 or more.

Spiraling U.S. military expenditures and an increased demand for American products abroad accompanying World War II finally ended the Great Depression. Nominal GNP increased by 86 percent between 1938 and 1942, when the economy finally reached full employment, and it climbed another 34 percent between 1942 and 1945. Total gross estate continued to fall through 1942, but increased, by 66 percent for decedents with \$100,000 or more, between 1942 and 1945 [8].

The average total gross estate, however, generally did not rebound and, as discussed later, the distribution of wealth was somewhat more equitable

after the Great Depression. Economists generally agree however, that wealth has been highly concentrated throughout this century. The distribution of total gross estate supports this conclusion, as it had a skewed shape throughout the 1916 to 1945 period (see Figure E, for example) [9].

#### Male and Female Estate Tax Decedents

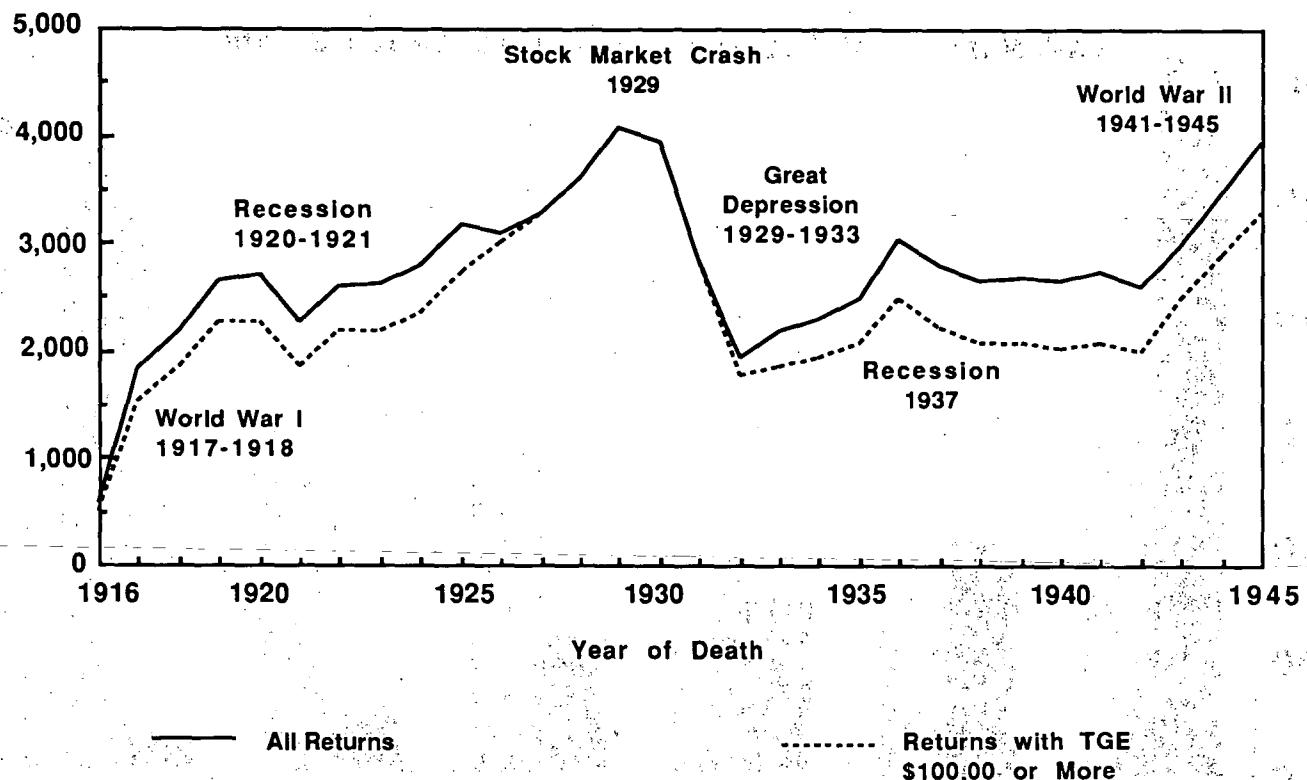

Most estate tax decedents were male, although the percentage of decedents who were female did increase over time, from a low of 23.4 percent in 1919 to a high of 35.5 percent in 1937. The relative number of females dropped to about 31 percent of estate tax decedents by 1945, due in part to the number of male fatalities during World War II. A similar drop in the portion of returns accounted for by female decedents, from 24.9 percent in 1916 to 23.4 percent in 1919, occurred during World War I. Information on cause of death has not yet been coded for analysis, but a review of the causes of death reported for male estate tax decedents under the age of 45, who died during 1942 through 1945, revealed that at least 253, or 18 percent, were killed in military service [10].

## Basic Estate Data, 1916-1945

Figure D

## Total Gross Estate (TGE) from All Returns and From Returns With Gross Estate of \$100,000 or More, 1916-1945

TGE (Millions of Dollars)

The size of total gross estate also varied by sex. Women were generally less wealthy than men during this period. In most years, fewer than a third of the estate tax decedents were women, and women accounted for an even smaller percentage of gross estate. For example, for year of death 1919, when a low of 23.4 percent of estate tax decedents were women, the assets of these women accounted for only 18.7 percent of the total gross estate reported. In 1937, when a high of 35.5 percent of estate tax decedents were women, assets of women accounted for only 31.6 percent of the total gross estate reported.

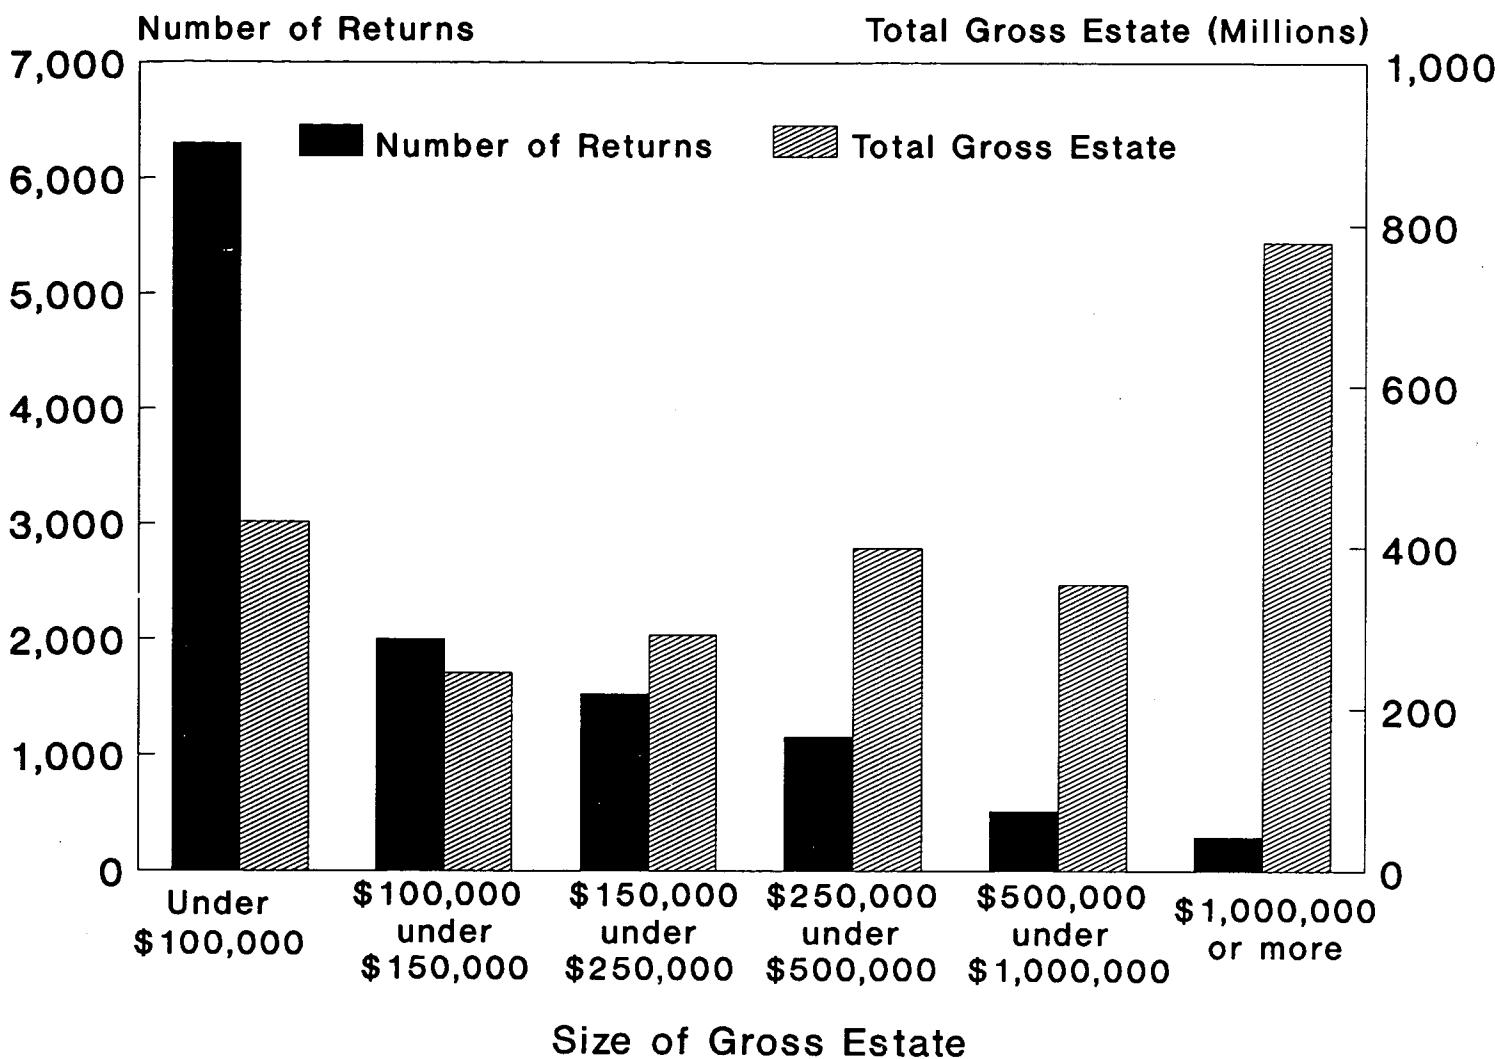

Figure F shows the average total gross estate for men and women with \$100,000 or more in gross estate. For all but 5 years, the average gross estate was higher for men. The degree of difference in average gross estate fluctuated from year to year. For example, in 1933, the estates of women were, on

average, 19.0 percent smaller than those of men. In 1934, the estates of women were only 0.7 percent smaller. (Only returns with \$100,000 or more are featured in Figure F because a significant portion of the fluctuation in the average size of smaller estates is a function of the filing requirement. The correlation between sex and size of gross estate still holds when all returns are analyzed.)

Note that average gross estate was significantly higher for women than for men in 1924. A review of the returns for the very wealthiest women for that year confirmed that there were no errors in the data and that the unusual number of extremely wealthy women who died in 1924 was apparently a random variation. Female decedents also had a larger average gross estate than male decedents in 1942 through 1945. This was due in part to the filing of returns for a large number of relatively less wealthy young males who died during World War II. Even

Figure E

## Number of Returns and Total Gross Estate by Size of Gross Estate, 1935

after eliminating the returns of decedents under the age of 50, however, women have a higher average gross estate than men for 1942 through 1945.

#### Age of Estate Tax Decedents

Estate tax decedents were, on average, older than decedents in the general U.S. population. Figure G shows that the mean age at death of estate tax decedents was higher than that of the decedents at large from 1920 through 1945. Wealthier individuals could better afford modern health care and adequate nutrition, and they were less likely to be exposed to work-related health hazards. In addition, it generally took time to amass personal wealth, so that the estates of younger decedents were less likely to be

subject to the Federal estate tax. The discrepancy in average age at death between estate tax and other decedents decreased, however, as overall mortality rates decreased.

As in the general U.S. population, the average age at death of estate tax decedents increased over the 1919 to 1945 period. The increase was more pronounced for females, and the average age of male estate tax decedents actually decreased by 2.3 years between 1941 and 1945. By 1945, female estate tax decedents lived, on average, 5.6 years longer than male estate tax decedents. As noted above, fatalities due to World War II resulted in an increase in the number of male estate tax decedents.

## Basic Estate Data, 1916-1945

Figure F

**Average Total Gross Estate (TGE) for Returns with Gross Estate \$100,000 or More, by Sex, 1916 to 1945**

Average TGE (Thousands of Dollars)

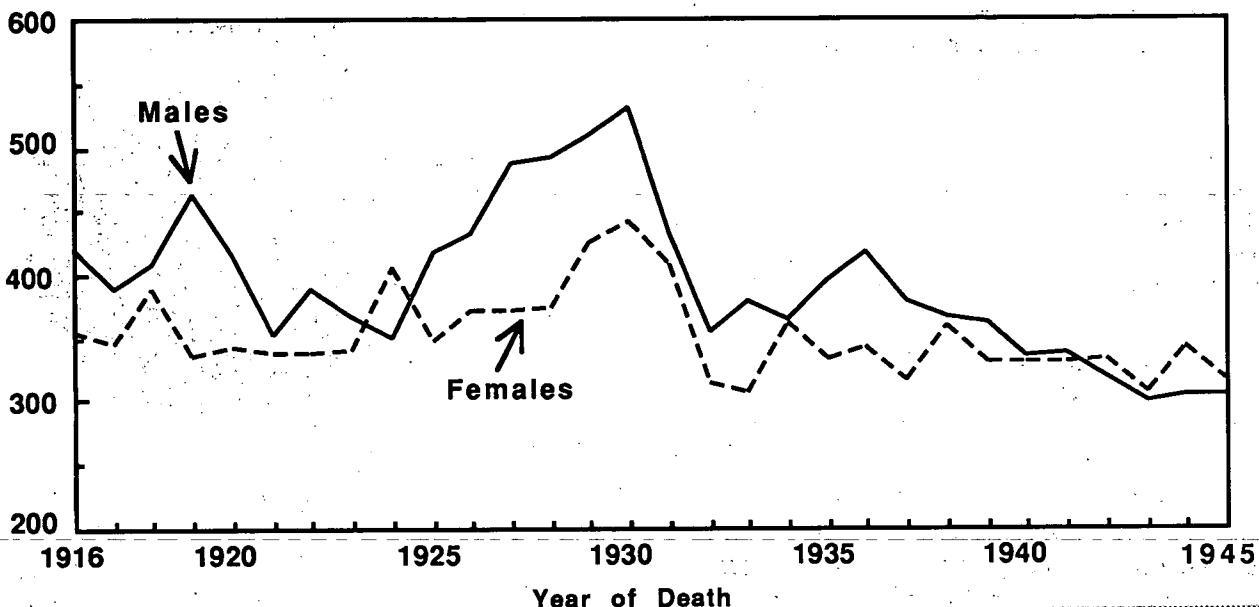

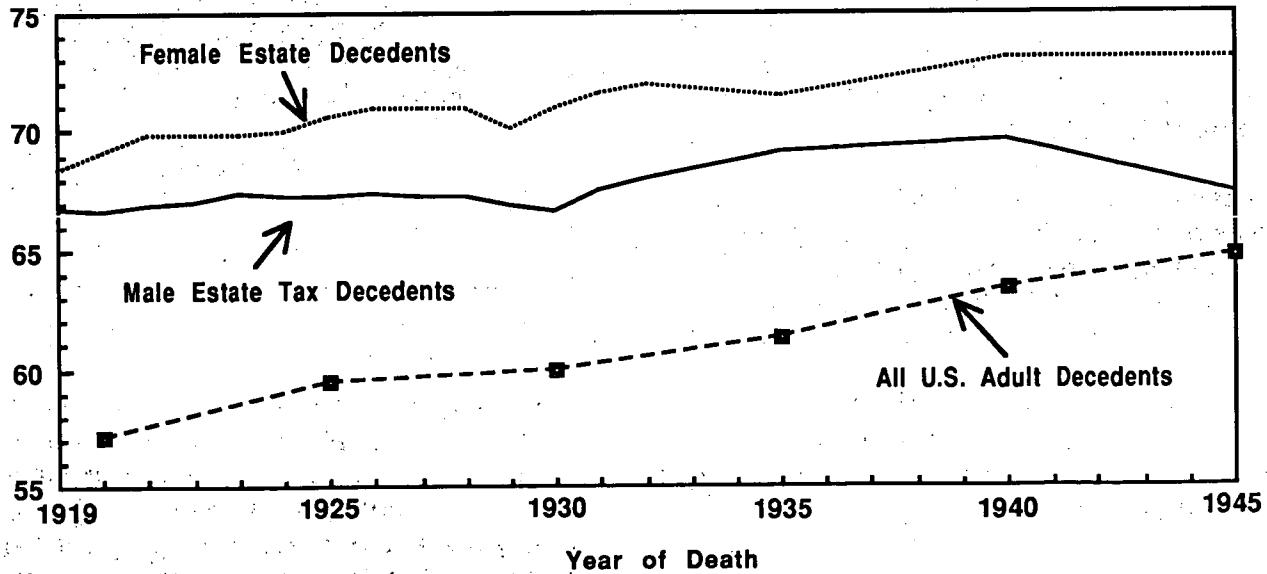

Figure G

**Average Age of Male and Female Estate Tax Decedents and Average Age of All U.S. Adult Decedents by Year of Death, 1919-1945**

Average Age at Death

These deaths also resulted in a lower mean age at death for male estate tax decedents. However, even the average of males aged 50 and over decreased between 1941 and 1945. This is true even after adjusting for the change in the filing requirement.

### Marital Status of Estate Tax Decedents

As would be expected given the mortality patterns noted above, most male estate tax decedents were married and most females were widowed (see the distribution for 1930 in Figure H). This pattern changed little between 1925 (the first year that marital status is available from the estate tax return) and 1945, although the number of separated or divorced decedents did rise from 0.4 percent to 2.0 percent over the period.

The marital status of males and females may contribute to the discrepancy between their gross estates. It is generally believed that few women had assets of their own during this period, and therefore that much of the property owned by women was inherited from their spouses. The inherited property in a widow's estate had already been subject to estate tax at the death of her husband. Thus even if a woman inherited all of her husband's property, it seems likely that her estate was smaller.

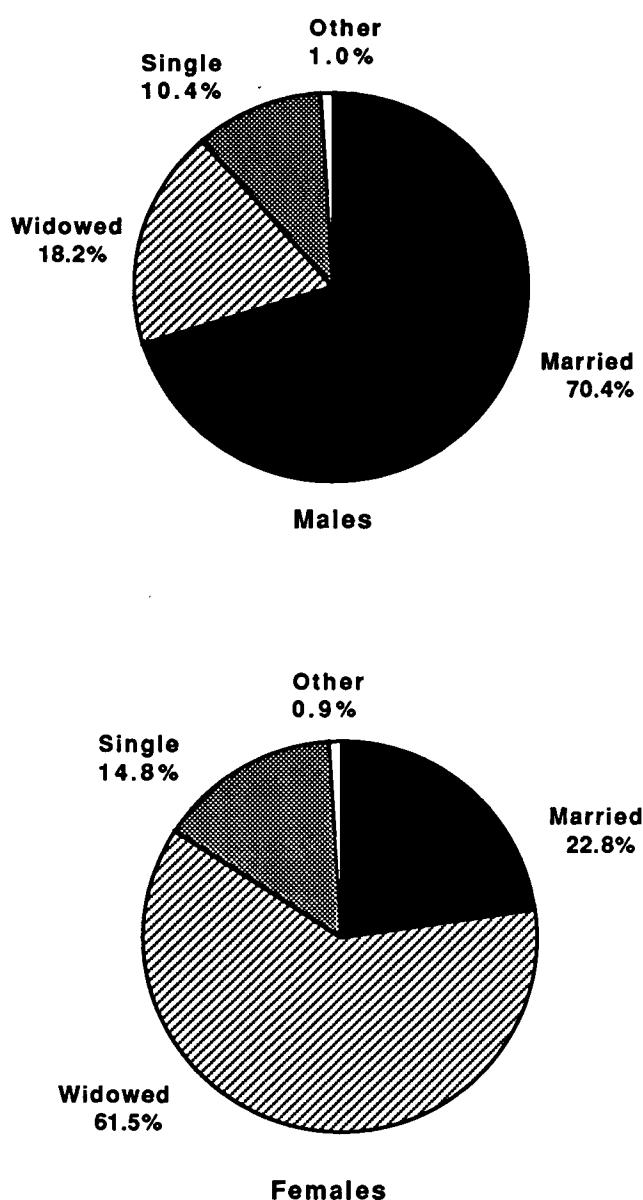

### DEBTS AND NET WORTH

Figure I shows debts and mortgages reported on estate tax returns as a percentage of total gross estate in each year [11]. The peak in 1932 corresponded with the low value of total gross estate for that year, one of the worst of the Great Depression. In most years, debt as a percentage of total gross estate decreased somewhat as the size of the estate increased. This was particularly true for decedents with estates of \$250,000 or more.

Male decedents incurred significantly more debt than female decedents. Even after subtracting debts, however, women were generally still less wealthy than men. In 20 of the 30 years, the average net worth (total gross estate less debts) was greater for men. As with average gross estate, however, there was some fluctuation in the percentage difference between the average net worth of men and women. The average net worth of women eventually overtook that of men in 1940.

Women may have incurred less debt than men because they were more risk adverse. The larger

**Figure H**  
**Marital Status of Estate Tax Decedents  
by Sex, 1930**

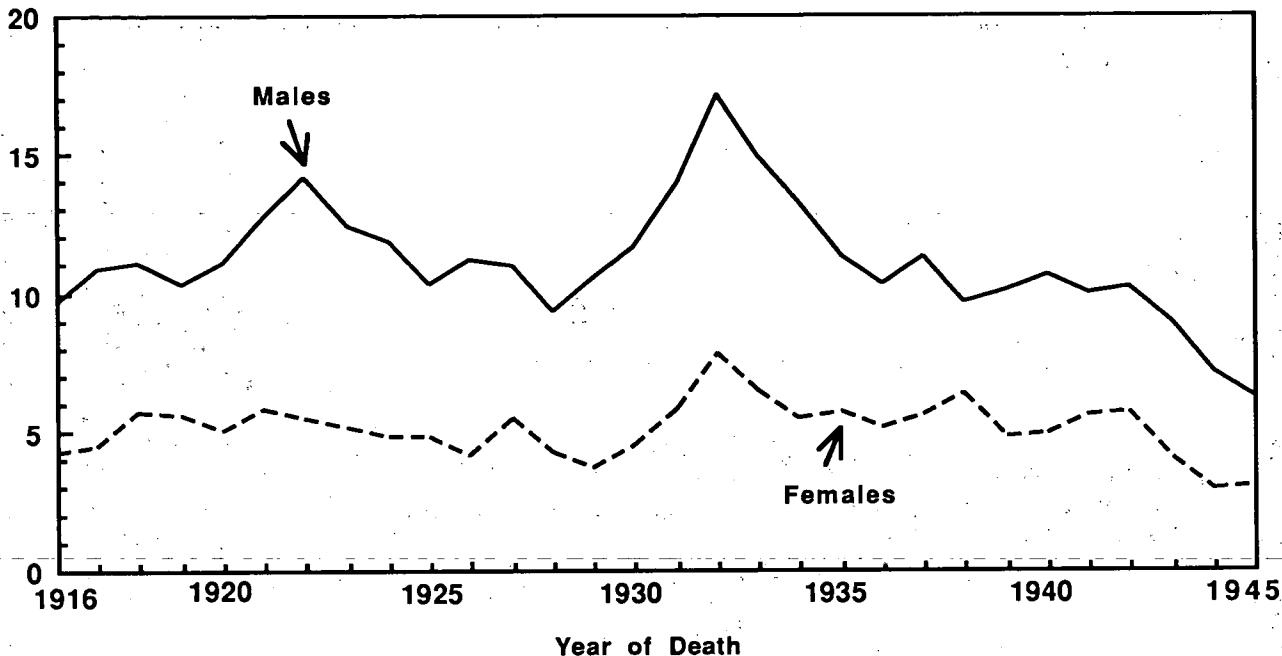

amount of debt incurred by men may also be due to the younger age at death of men, as indebtedness tended to be inversely correlated with the age of the decedent. Figure J shows debts as a percentage of total gross estate for selected age groups and years of death. The total gross estate was only slightly correlated with the age of the decedent. Debts,

## Basic Estate Data, 1916-1945

**Figure I**

**Debts and Mortgages as a Percentage of Total Gross Estate by Sex, 1916-1945**

Percentage of Gross Estate

however, decreased significantly as age increased, so that net worth did increase with age.

### THE ESTATE TAX

The reach of the estate tax, like that of the individual income tax, was extended significantly during the first half of this century. The Federal estate tax reported grew from \$11.7 million to \$597.2 million between 1916 and 1945. Figure K shows the effective rate structure of the tax in 1920 and 1940. Most returns for decedents from the 1916 to 1945 period were taxable (see Figure L).

Given that the estate tax was progressive and women were generally less wealthy than men, it should follow that higher taxes were paid for men's estates. This was generally true (see Figure M). Proportionately more taxes were paid for estates of women who died in 1916, 1917, 1924, 1940 and 1944, but average net worth was also greater for women in 1924, 1940 and 1944. In addition to estate size, two other factors contributed to a smaller tax

**Figure J.—Debts and Mortgages Expressed as a Percentage of Total Gross Estate by Age, Selected Years of Death, 1920-1945**

Year of death	Age group			
	Under 60	60 Under 70	70 Under 80	80 and over
1920.....	15.5%	11.0%	6.4%	4.9%
1925.....	14.7	10.2	6.4	4.3
1930.....	17.1	11.3	6.6	3.7
1935.....	16.0	12.5	8.3	3.9
1940.....	14.6	10.4	7.6	5.1
1945.....	9.2	5.8	4.3	3.0

for women's estates: most women were widowed and many would have received the deduction for property previously taxed in their husbands' estates. Secondly, women as a group contributed a larger portion of their estate to charities [12].

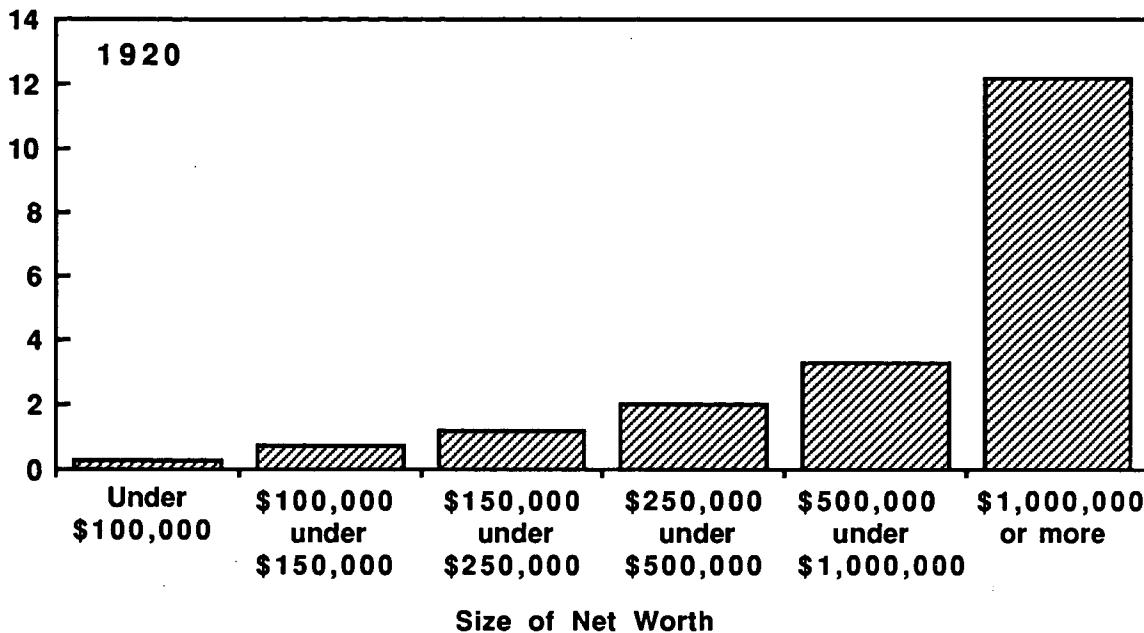

### DISTRIBUTIONAL CHANGES OVER TIME

As shown in Figure E, the distribution of gross estate is skewed to the right. Net worth, defined here as gross estate less debts, is similarly concentrated. While the distributions of wealth and income in the

## Basic Estate Data, 1916-1945

**Figure L.—Number of Taxable Returns Expressed as a Percentage of All Returns, by Sex, Selected Years of Death, 1920-1945**

Year of death	Percentage taxable	
	Males	Females
1920	82.1%	81.3%
1925	79.2	78.4
1930	79.6	80.1
1935	80.7	82.7
1940	82.1	84.1
1945	87.1	84.2

United States remain unequal, many economists have reported "a significant shift toward greater equality in the 20th century which some writers refer to as a modern social revolution" [13]. Lampman used estate tax data to estimate that the top 1 percent of adults held 36.3 percent of U.S. wealth in 1929, but only 23.3 percent in 1945 [14]. He suggested that price changes, decreases in the rate of saving by the wealthy and changes in wealth transfer and wealth holding practices which led to an increase in the number of women and younger persons among the wealthy contributed to the decrease in wealth inequality between 1922 and 1953. This change in the distribution of wealth is reflected in the estate tax data [15].

### Data in Constant (1945) Dollars

Because these data span 30 years, it is useful to isolate the real increases in estate tax wealth by converting the data to constant dollars. The aggregate value of total gross estate generally exhibited an upward trend over the 1916 to 1945 period (see Figure N) [16]. The average total gross estate decreased, however, particularly after 1930. For example, the average total gross estate reported on returns with gross estate \$150,000 or more was nearly \$618,000 in 1919 [17]. After falling to under \$484,000 for those who died in 1921, it rose to \$680,000 in 1930. It generally fell from that peak, dropping to \$440,000 by 1945. Average net worth of this group of decedents fell from \$613,000 in 1930 to \$417,000 in 1945. This decrease is one indication of the shift in the distribution of wealth that occurred after 1929. Another sign is the dramatic decrease in the number of millionaires for whom estate tax returns were filed after 1929 (see Figure O). The portion of gross estate (from returns with \$150,000 or more) held by these millionaire decedents also fell, from 57 percent in 1930 to 35 percent in 1945.

### The Wealthiest 0.5 Percent of U.S. Decedents

Federal estate tax returns provide data on the upper tail of the estate wealth distribution. These data captured a different portion of the wealth distribution in each year, because of changes in the filing requirement and increases or decreases in wealth. This variation was illustrated in Figure B. Converting total gross estate to constant dollars and looking only at returns exceeding some amount, such as \$100,000 or \$150,000, eliminates the effects of fluctuations in the filing requirement and inflation, but it does not account for real changes in the size and shape of the wealth distribution. The percentage of U.S. decedents represented by estate tax data adjusted in this way still varies because of real growth (or declines) in wealth and changes in the shape of the distribution.

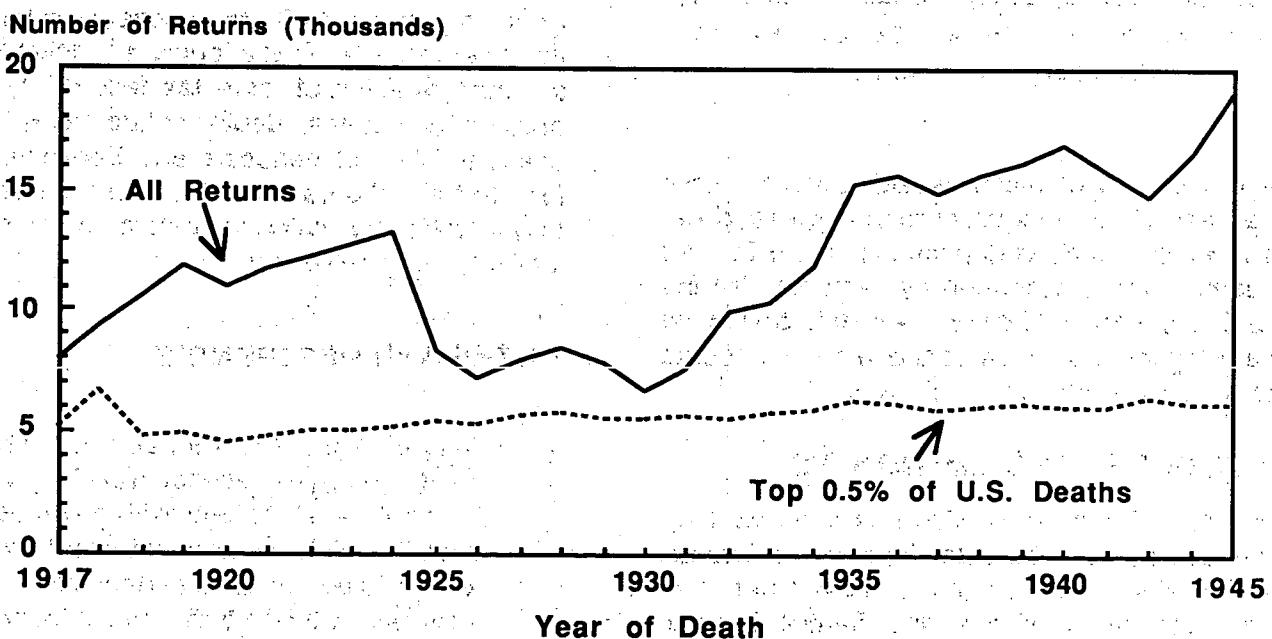

However, in every year from 1917 to 1945, at least the wealthiest 0.5 percent of adult U.S. decedents were affected by the Federal estate tax. Distributional changes in estate wealth over time can be more consistently evaluated by studying the distribution of

estate wealth among just these returns. (Data for 1916 are not analyzed in this section, because the estate tax was not effective until September of that year.)

Figure P shows all returns and the number of returns representing the wealthiest 0.5 percent of adult U.S. decedents. The top 0.5 percent of decedents was much more stable, although variations did occur, as the number of U.S. deaths fluctuated. For example, in 1918 the number of deaths was unusually high, due in large part to World War I and an influenza pandemic. Because primarily young people (who are less likely to have estates above the estate tax filing requirement) died from these causes, the total number of estate tax returns filed for 1918 was equal to only 0.7 percent of adult deaths.

The allocation of wealth among these decedents can be analyzed by comparing the cumulative distribution of returns to the cumulative distribution of net worth. Graphs of these distributions, known as Lorenz curves, are shown for 1930 and 1945 in

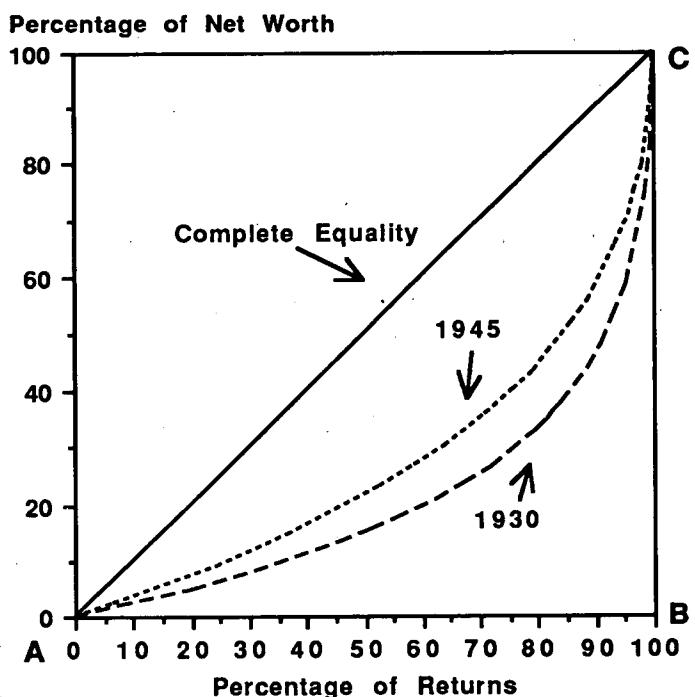

**Figure P**  
All Returns and Returns for the Wealthiest 0.5 Percent of  
U.S. Adult Deaths, 1917-1945<sup>1</sup>

<sup>1</sup> U.S. resident decedents age 20 and over.

Figure Q. If net worth were equally distributed among decedents, the plot of the cumulative distribution of net worth against the cumulative distribution of returns would form the straight line, AC. If the distribution were completely unequal (if one individual accounted for all estate wealth), the result would be the right angle ABC [18].

**Figure Q**  
Cumulative Distribution of Returns Compared to  
Cumulative Distribution of Net Worth, Top 0.5  
Percent of U.S. Adult Decedents, 1930 and 1945

The distribution of estate wealth became more unequal until 1930. Inequality then decreased between 1930 and 1945, as depicted in Figure Q. This is the same pattern described by Lampman for the living U.S. population. Data on the distribution of net worth among the top 0.5 percent of adult decedents in other years are provided in Table 5.

#### DATA SOURCES AND LIMITATIONS

The Internal Revenue Service has been working for 5 years to collect data from all Federal estate tax returns filed since 1916. Estate tax returns filed from 1916 to 1950 are stored at the Seattle Federal Records Center in Washington. Returns filed after 1950 are stored at eight Federal Records Centers around the country. The data presented here were recently collected from estate tax returns filed for

individuals who died during the years 1916 to 1945 and stored at the Seattle Federal Records Center.

Because all returns are included in the study, the data are not subject to sampling error. However, some returns from the 1916 to 1945 period may be missing. It is likely, for example, that a small number of returns are stored in other Federal Records Centers. Data will be collected from these returns as the study progresses. Comparisons of these new data to tabulations published in the *Statistics of Income* series for filing years 1916 to 1945 indicate that nearly all of the returns filed during this period have been included in the new study [19]. For some filing years, the number of recoded returns exceeds the number originally tabulated. This probably is due to delays or omissions experienced during the original processing.

The data are subject to nonsampling error. Estate valuations are generally believed to be of good quality however, largely because estate tax returns are usually completed by professional tax advisors who exhibit high levels of skill and integrity.

Data collection from returns filed for individuals who died during the 1946 through 1950 period is nearly complete. Data collection from the returns for individuals who died during 1951 through the 1970's will resume in July 1990. In addition, a collection of detailed cross-tabulations of data from the Intergenerational Wealth Study is scheduled for publication later in 1990. These tables will include data on the characteristics of estate tax decedents, the composition of estates, debts, estate taxes, and the characteristics of bequests and beneficiaries. Efforts to trace the transfer of wealth from generation to generation by linking the estate tax returns within families will be reviewed.

#### NOTES AND REFERENCES

- [1] Data are collected from all estate tax returns for the Intergenerational Wealth Study. Data from the 22,004 returns with gross estate less than the filing requirement and from the few returns filed for nonresident aliens are not included in this article. Preliminary data for 1916 through 1931 were published in Medve, Kathy, "Estate Tax Returns Revisited, 1916-31," *SOI Bulletin*, Spring 1987, Volume 6, Number 4.

## Basic Estate Data, 1916-1945

- [2] All tabulations are presented by year of death, rather than by filing year. Assets included in the total gross estate are included at their value as of the date of death, except when the optional valuation date of 1 year after death was elected. Optional valuation was available August 1935 and thereafter. The number for which the optional valuation date was elected is not known for these returns. (Currently, both the alternate value and the date of death value are captured.) See the appendix for a description of alternate valuation and other tax law provisions.
- [3] In 1976, the specific exemption was replaced by the unified credit in effect today. The unified credit is applied after the computation of the tax. See the appendix for information on the specific exemption and other tax law provisions.
- [4] For a review of changes in the valuation of estates through audits, see Harriss, C. Lowell, "Wealth Estimates as Affected by Audit of Estate Tax Returns," *National Tax Journal*, December 1949; and McCubbin, Janet G., "Improving Wealth Estimates Derived from Estate Tax Data," *Statistics of Income and Related Administrative Record Research: 1986-1987*, Internal Revenue Service, 1987.
- [5] U.S. Bureau of the Census, *Mortality Statistics*, annual volumes 1916-1936 and *Vital Statistics of the United States*, annual volumes, 1937-1945. Deaths were not reported by every State prior to 1933. For 1916 to 1932, deaths for the United States were estimated by applying the death rate and the deaths of individuals under 20 years of age as a percentage of all deaths, calculated from the death registration states, to the mid-year population of the entire United States. Deaths of individuals under 20 years of age are excluded because very few estate tax decedents are under 20 years of age and because the death rate for children declined markedly over the period. For 1940 through 1945, the number of U.S. deaths excludes deaths of U.S. military personnel abroad. Such deaths are included in the estate data.

- [7] Gunderson, *op. cit.*, and Bruchey, Stuart, *The Wealth of the Nation*, Harper and Row, New York, 1988.
- [8] This is not to suggest that war is in all respects good for the economy. For example, between 1940 and 1945, 324,000 firms (10 percent of the 1940 total) went out of business. Most of these were small businesses. The majority of Government contracts during the war went to large businesses with the ability to produce enormous amounts of military materials. See Bruchey, *op. cit.*
- [9] Wealth is generally distributed lognormally. The Pareto curve also fits the upper tail of the wealth distribution. The lognormal distribution and Pareto curve are described in Cowell, F. A., *Measuring Inequality*, John Wiley and Son, New York, 1977.
- [10] The cause of death reported for each of these 253 men clearly indicated that they were killed in action or died as a result of injuries sustained in military services. The causes of death for many other men ("lost at sea," "airplane crash," "gangrene") were less clear. Further analysis will most likely reveal that some of these men died as a result of military service. The United States entered World War I in April 1917 and the Armistice was signed in November 1918. American involvement in World War II began in December 1941 and continued through August 1945. Cause of death is not available for returns filed prior to 1923.
- [11] For some decedents, debts and mortgages may have exceeded the value of the estate. For this article however, they are constrained to the value of the estate for each decedent. This treatment seems more consistent with an analysis of estate wealth at death, as payments to creditors cannot exceed the value of the estate.

Analyses of the concentration of wealth can also be found in Smith, James D. and Franklin, Stephen D., "The Concentration of Personal Wealth, 1922-1969," *American Economic Review*, May 1974; and Wolff, Edward N. and Marley, Marcia, "Long-Term Trends in U.S. Wealth Inequality: Methodological Issues and Results," in Lipsey, Robert E. and Tice, Helen Stone, ed., *The Measurement of Saving Investment, and Wealth*, University of Chicago Press, Chicago, 1989. Estimates by Lampman, Schwartz and Johnson, and Smith and Franklin are derived from estate tax data. Discussions of the limitations of estate data for constructing estimates of wealth held by living individuals can be found in the chapter by Wolff and Marley and in Scheuren, Fritz and McCubbin, Janet, "Piecing Together Personal Wealth Distributions," *Statistics of Income and Related Administrative Record Research: 1986-1987*, Internal Revenue Service, 1987. A current estimate of wealth concentration derived from estate tax data can be found in Schwartz, Marvin and Johnson, Barry, "Personal Wealth Estimates, 1986," in this volume.
- [15] Note that the following discussion focuses on wealth reported on estate tax returns rather than on wealth estimates for living individuals.
- [16] The Consumer Price Index, produced by the Bureau of Labor Statistics, was used to convert data for all years to constant dollars. The index for 1947-1949=100 was adjusted so that 1945=100.
- [17] Returns with \$150,000 or more are used in the discussion of average gross estate to eliminate the effect of changes in the filing requirement. \$100,000 was used as the cut-off in previous sections, when data were presented in current dollars. The highest constant dollar value of the filing requirement is \$131,752 (for the first 5 months of 1932). A cut-off of \$150,000 is used instead of \$131,752 simply because it is more convenient.
- [18] For a discussion on how to derive and interpret Lorenz curves and other measures of inequality, see Loehr, William and Powelson, John P., *The Economics of Development and Distribution*, Harcourt Brace Janovich, Inc., New York, 1981.
- [19] Data in the *Statistics of Income* series were presented by filing year. Data in this article are organized by year of death, although they can be tabulated by filing year for comparisons to the older series.

## APPENDIX

### Overview of Estate Tax Provisions

The Appendix provides a brief overview of the Federal estate tax laws applicable to citizens and residents of the United States. Provisions affecting only non-residents are not discussed.

#### The Revenue Act of 1916, Effective September 9, 1916

The Revenue Act of 1916 required that a Federal estate tax return be filed after the death of any individual who died on or after September 9, 1916, and whose total gross estate exceeded \$60,000 or whose net estate exceeded \$50,000.

Total gross estate was defined as all tangible and intangible assets owned by the decedent, transfers made in contemplation of death and all transfers made within 2 years of death, except for bona fide sales. (It was presumed that gifts made within 2 years of death were made in contemplation of death and thereby subject to estate taxation.) Property owned jointly by the decedent and others was fully included in the gross estate except for the portion that could be shown to have been contributed by the other joint owner(s).

Net estate was defined as total gross estate less the deduction of debts and mortgages, funeral and administrative expenses, payments for the support of the decedent's dependents required by local law, uninsured losses during administration arising from casualty (fire, storm, etc.) or theft and a specific exemption of \$50,000.

Estate tax rates were progressive and ranged from 1 percent of the first \$50,000 of net estate to 10

## Basic Estate Data, 1916-1945

percent of the portion of net estate exceeding \$5,000,000. There were no credits against the tax. The tax was due 1 year after the date of death and a 5 percent per annum discount was provided for early payment.

### **The Act of March 3, 1917**

The tax rate in each bracket was increased by 50 percent, so that rates ranged from 1.5 percent on the first \$50,000 of net estate to 15 percent on the portion of net estate over \$5,000,000.

### **The Revenue Act of 1917, Effective**

**October 4, 1917**

Rates were increased further to range from 2 percent on the first \$50,000 of net estate to 25 percent of the portion of net estate over \$10,000,000. The rate increase did not apply to the estates of decedents who died while serving in U.S. military forces during World War I or if death from injuries sustained or disease contracted in military service occurred within 1 year of the end of the War.

### **The Revenue Act of 1918, Effective February**

**24, 1919**

Returns were required for all gross estates exceeding \$50,000.

Three items were specifically mentioned as includable in total gross estate: 1) the interest of the surviving spouse in property existing at the time of a decedent's death as dower or curtesy, 2) property passing under a general power of appointment exercised by the decedent by will or in contemplation of death and 3) all insurance proceeds from policies taken out by the decedent on his or her own life accruing to the estate and such proceeds in excess of \$40,000 accruing to beneficiaries other than the estate.

Two new deductions from total gross estate were allowed in the computation of net estate: 1) property received by the decedent as a share in the estate of any person dying within 5 years of the decedent (or any property received in exchange for such inherited property), if the property had been previously subject to estate tax under the Revenue Acts of 1917 or 1918, and if the property previously taxed was included in the decedent's gross estate; and 2) bequests to charitable, educational or artistic organizations. The deduction for charitable bequests was allowed retroactively to the estates of decedents who died after December 31, 1917.

Tax rates on the first \$450,000 of net estate were reduced by 50 percent and tax rates on the portion of net estate between \$450,000 and \$1,500,000 were reduced by a smaller percentage. Tax rates ranged from 1 percent of the first \$50,000 of net estate to 25 percent of the portion of net estate exceeding \$10,000,000.

The Act stipulated that the estate tax did not apply to the estates of decedents who died while serving in U.S. military forces in World War I or from injuries received or diseases contracted while in military service. It provided for a refund of taxes already collected from such estates under the 1916 and 1917 Acts. (The data presented in this article probably include some returns for servicemen filed before this refund was authorized, but because the cause of death was not present on the returns at that time, it is not possible to identify and adjust for such returns.)

The tax was due 1 year after the date of death with no provision for a discount for early payment. An extension of up to 3 years could be granted if payment of tax imposed undue hardship on the estate. (The tax not paid within 18 months of the date of death was subject to 6 percent per annum interest, irrespective of the extension of time to pay as provided under earlier acts.)

### **The Revenue Act of 1921, Effective**

**November 23, 1921**

The 1921 Act retained the provisions outlined in the 1918 Act and extended the deduction for property previously taxed to the estates of all decedents dying after September 8, 1916. It further stipulated that the deduction was limited to the value of the property used in determining the tax on the first estate and to the extent that deductions for charitable bequests or losses during administration were not already applied against the property.

### **The Revenue Act of 1924, Effective June 2, 1924**

The definition of total gross estate was expanded to include any property that the decedent had transferred or placed in trust but over which he or she had retained a power of appointment, exercisable by the decedent alone or with others. This type of power relinquished in contemplation of death was also included in the gross estate.

The deduction for property previously taxed was extended to property received as a gift within 5 years

of the decedent's death and previously subject to the gift tax (see below). The charitable deduction was limited to the value of the donated property reduced by any estate or inheritance taxes paid out of the charitable bequest. This limitation was later eliminated by the Revenue Act of 1926.

Tax rates were increased to range from 1 percent on the first \$50,000 of net estate to 40 percent on the portion of net estate over \$10,000,000. The maximum extension of time to pay the tax was increased from 3 to 5 years. This change was retroactive November 23, 1921, the effective date of the 1921 Act.

A gift tax and corresponding estate tax credit for gift taxes paid on property included in the estate was also introduced by the Revenue Act of 1924. (The tax rate schedule applied to taxable gifts was the same as that for net estate.) A credit for death taxes paid to States, U.S. territories and the District of Columbia was introduced. The credit was limited to 25 percent of the Federal estate tax, after the deduction of the credit for gift tax.

The estate tax rate increase described above was rescinded by the Revenue Act of 1926, so that estates of individuals who died between June 2, 1924 and February 26, 1926 were subject to the rates established in the Revenue Act of 1921. The gift tax was also repealed, and gift tax rates for Calendar Years 1924 and 1925 were reduced retroactively. The reductions were larger in the upper brackets. The maximum gift tax rate was reduced to 25 percent on the portion of taxable gifts over \$10,000,000. Taxes collected under the original 1924 Act in excess of the taxes imposed under the revised Act were refunded without interest.

Original Statistics of Income data for returns filed January 1, 1925 through December 31, 1926 (primarily for individuals who died January 1924 through December 1925) were adjusted to account for the refunds. The effect of the refunds on the new data is unclear. Editors were instructed to record the final tax figure shown on each return, but it is not known how often the refund had been incorporated on the original return. Certainly some returns showed the correct final tax figure, since a return was not due until 1 year after the date of death. Therefore, if an individual died after February of 1925, the Revenue Act of 1924 would have already been rescinded at the time the return was due and it seems

likely that the return would reflect the revised law. However, from the data presented in this article, the average effective tax rate for year of death 1924 is over 20 percent higher than that for 1923. Thus, for some returns, the new data may reflect the 1924 Act before its amendment.

#### **The Revenue Act of 1926, Effective February 26, 1926**

The filing requirement was increased from \$50,000 to \$100,000.

The definition of transfers made within 2 years of the decedent's death but after the enactment of the 1926 Act was modified to include only gifts to any one person of \$5,000 or more. All gifts made within 2 years of death but before the effective date of the 1926 Act were still fully included in the gross estate. The same \$5,000 criterion was used to determine which transferred assets over which the decedent retained a power of appointment were included in the gross estate.

As noted, the Revenue Act of 1926 rescinded the tax rate increase provided for by the Revenue Act of 1924. In addition, rates for estates of individuals dying February 26, 1926 and after were further reduced. They ranged from 1 percent on the first \$50,000 of net estate to 20 percent on the portion of net estate exceeding \$10,000,000.

The State death tax credit was revised such that the credit was limited to 80 percent (rather than 25 percent) of the Federal estate tax. The gift tax credit was repealed along with the other gift tax provisions, but was revived retroactively by the 1928 Act. (The Revenue Act of 1928 contained no other significant estate tax provisions.)

#### **The Revenue Act of 1932, Effective June 6, 1932**

The filing requirement was reduced to \$50,000.

In the Revenue Act of 1932 the gift tax was re-introduced and an additional tax was superimposed on the basic estate tax. The basic estate tax remained as provided for by the Revenue Act of 1926. It was applicable to the net estate after the deduction of the \$100,000 specific exemption with rates ranging from 1 to 20 percent. Credits against the basic tax included the gift tax credit for any gift tax paid under the 1924 act, a credit for gift tax paid

## Basic Estate Data, 1916-1945

under the 1932 Act limited to the proportion of the basic tax that the included gifted property bears to the entire gross estate. The credit against the basic tax for state death taxes paid was limited to 80 percent of the basic tax after deduction of the gift tax credits.

The additional tax was defined as the excess of the tentative tax over the basic tax before credits. The exemption used in computing net estate for tentative tax purposes was \$50,000 (rather than \$100,000). Tentative tax rates ranged from 1 percent on the first \$10,000 of net estate to 45 percent on the portion of net estate exceeding \$10,000,000.

No credit for gift taxes paid under the 1924 Act was allowed against the tentative tax. A credit for gift taxes paid under the 1932 Act, limited to: 1) the proportion of the additional tax that the value of the included gift bears to the entire gross estate and 2) the difference between the total gift tax and the gift tax credit allowed against the basic tax, was allowed. No state death tax credit was allowed against the tentative tax. The total Federal estate tax was then the basic tax + the additional tax which is equal to the basic tax after credits + (tentative tax after credit - basic tax before credits).

### **The Revenue Act of 1934, Effective May 11, 1934**

The tentative tax rates on the portion of net estate exceeding \$70,000 were increased. Tentative tax rates ranged from 1 percent on the first \$10,000 of net estate to 60 percent of net estate over \$10,000,000.

### **The Revenue Act of 1935, Effective August 31, 1935**

The filing requirement was reduced to \$40,000.

The optional valuation date was introduced. If elected, the entire gross estate was valued as of 1 year after the date of death (rather than as of the date of death). Property disposed of during the year was valued as of the date of disposition. (The optional value is now referred to as the alternate value.)

The basic tax remained the same as provided for in the Revenue Act of 1926. The specific exemption used in computing net estate for the purposes of the tentative tax was reduced to \$40,000. The tentative

tax rates were increased. They ranged from 2 percent on the first \$10,000 of net estate to 70 percent on the portion of net estate in excess of \$50,000,000.

Returns were due 15 months after the date of death.

### **The Revenue Act of 1939, Effective June 30, 1939**

The State death tax credit was extended to allow credit for death taxes paid to any U.S. possession.

### **The Revenue Act of 1940, Effective June 26, 1940**

A "defense tax" of 10 percent of the sum of the total tax (basic and additional taxes) after credits was imposed.

### **The Revenue Act of 1941, Effective September 21, 1941**

The "defense tax" was repealed. The tentative tax rates were increased. They ranged from 3 percent on the first \$5,000 of net estate to 77 percent of the portion of net estate exceeding \$10,000,000.

### **The Revenue Act of 1942, Effective October 22, 1942**

The filing requirement was increased to \$60,000.

There were three changes to the composition of total gross estate:

1) The full value (rather than 50 percent) of community property was included in the gross estate, except where the property could be shown to have been received in compensation for services rendered by the surviving spouse or derived from separate property originally owned by the surviving spouse. Previously, community property was included only to the extent of the State law. Community property states included Arizona, California, Idaho, Louisiana, Nevada, New Mexico, Texas and Washington.

2) The exclusion of up to \$40,000 of proceeds of life insurance receivable by beneficiaries other than the estate was disallowed. All insurance on the life of the decedent payable to the estate and all insurance on the life of the decedents which the decedent owned or for which he or she paid premiums became fully taxable.

3) Nearly all property over which the decedent had a power of appointment (a right to determine who may enjoy a property or income from it) was included in the gross estate, even if the power was not exercised. Previously, only general powers of appointment that had actually been exercised were included in the gross estate. Powers of appointment not included were those for which a) the decedent could only appoint to members of his or her or the donor's immediate family, b) the decedent could appoint only to charity and c) powers which could only be exercised by a disinterested fiduciary in favor of a restricted class of

persons.

Deductions of debts and mortgages, funeral and administrative expenses, and for support of dependents were limited to the value of property included in the gross estate subject to claims.

The basic and tentative taxes remained as provided for under the Revenue Act of 1941. The State death tax credit against the basic tax was revised such that it was limited to 80 percent of the basic tax before (rather than after) deducting the credit for gift taxes paid.

N/A — Not applicable; the filing requirement was \$100,000 during these years.

Note: Returns with gross estate under the filing requirement are not included in this table.

Data on males and females may not add to total for all decedents because the sex of some decedents is unknown.

# Basic Estate Data, 1916–1945

**Table 2.—All Returns: Number, Total Gross Estate and Debts and Mortgages, by Age and Sex of Decedent, Years of Death, 1919–1945**

<sup>1</sup> Data for residents of Arizona and New Mexico and for residents of North Dakota and South Dakota are combined to preserve the confidentiality of taxpayer information.

<sup>2</sup> Less than \$500.

<sup>3</sup> Includes return of U.S. citizens with a place of residence in Puerto Rico, in U.S. possessions or territories, or elsewhere abroad.

Note: Returns with gross estate under the filing requirement are not included in this table.

## Basic Estate Data, 1916-1945

Table 4.—All Returns: Number, Total Gross Estate by Size of Gross Estate in 1945 Dollars, Years of Death, 1916-1945

[Money amounts are in thousands of 1945 dollars]

Year of death	All returns		Size of gross estate							
			Under \$100,000		\$100,000 under \$150,000		\$150,000 under \$250,000		\$250,000 under \$500,000

Notes: Percentages are based only on returns for the top 0.5 percent of decedents.

The price index used is based on the Consumer Price Index Developed by the U.S. Department of Labor, Bureau of Labor Statistics.

Data on the number of deaths are from U.S. Department of Commerce, Bureau of the Census, *Mortality Statistics*, annual volumes for 1916-1936 and *Vital Statistics of the United States, Part II*, annual volumes for 1937-1945. "Adult" refers to decedents age 20 years and older. Prior to 1933, deaths were not reported by every State. U.S. adult deaths for 1916-1932 are estimated by applying the death rates and percentages of decedents age 20 years and older in the death-registration States to the total U.S. mid-year populations.
